RayFlow®

RayFlow Client 3.3 Hotfix 1
Release Notes

RayFlow®
Workflow for Enterprise Software Packaging

Table of Contents

Introduction

This release of RayFlow Client 3.3 Hotfix 1 provides both, functional improvements, as well as fixes for known issues from prior versions. RayFlow Client is available as a stand-alone product as well as can serve as the backbone for RaySuite Enterprise Solution.
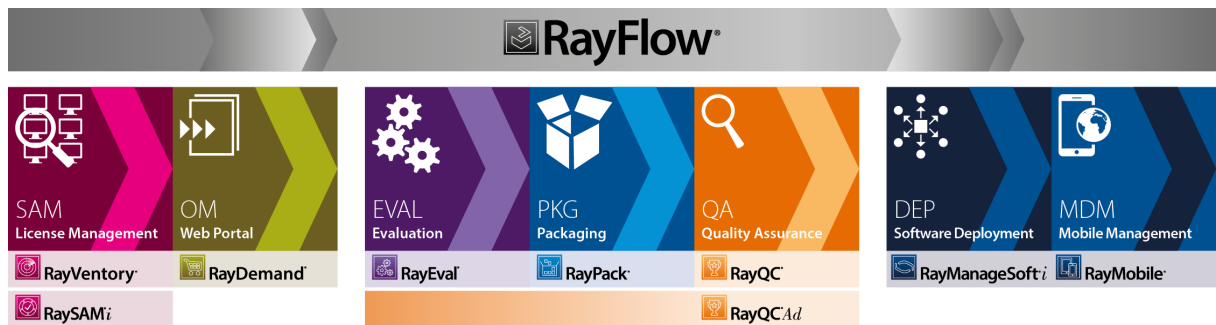

Enterprise Application Lifecycle Management

Visit www.raynet.de for further information regarding the product and current community incentives.

Raynet is looking forward to receiving your feedback from your RayFlow Client experience. Please contact your Raynet service partner or write an e-mail to sales@raynet.de to add your ideas or requirements to the RayFlow Client development road map!

New Features & Improvements

Improved User Interface

To make the RayFlow client more user-friendly, the following changes have been made to the user interface:

- The screen layout and skin has been changed/modified to provide users with a more concise and efficient look

- The direct link to RayFlow server (which is part of the Settings view) is now shown on the Welcome view

- A user can now choose between English and German as the user interface language

- Additional Get Started view has been added to provide users with direct access to various local and online resources, related to the RayFlow client

Copy Web Link

The Copy Web Link feature allows a user to directly copy the URL of a task from the client. This URL which is a combination of RayFlow server address, `phase id` and `task id`, can be used to directly access a task through the RayFlow web client.

This link address can be quite useful to RayFlow users, as they can copy it and use it to reference a task in team communication via email, appointment, comments or other medium.

This feature can be accessed through the task context menu, which is shown in the Tasks view.
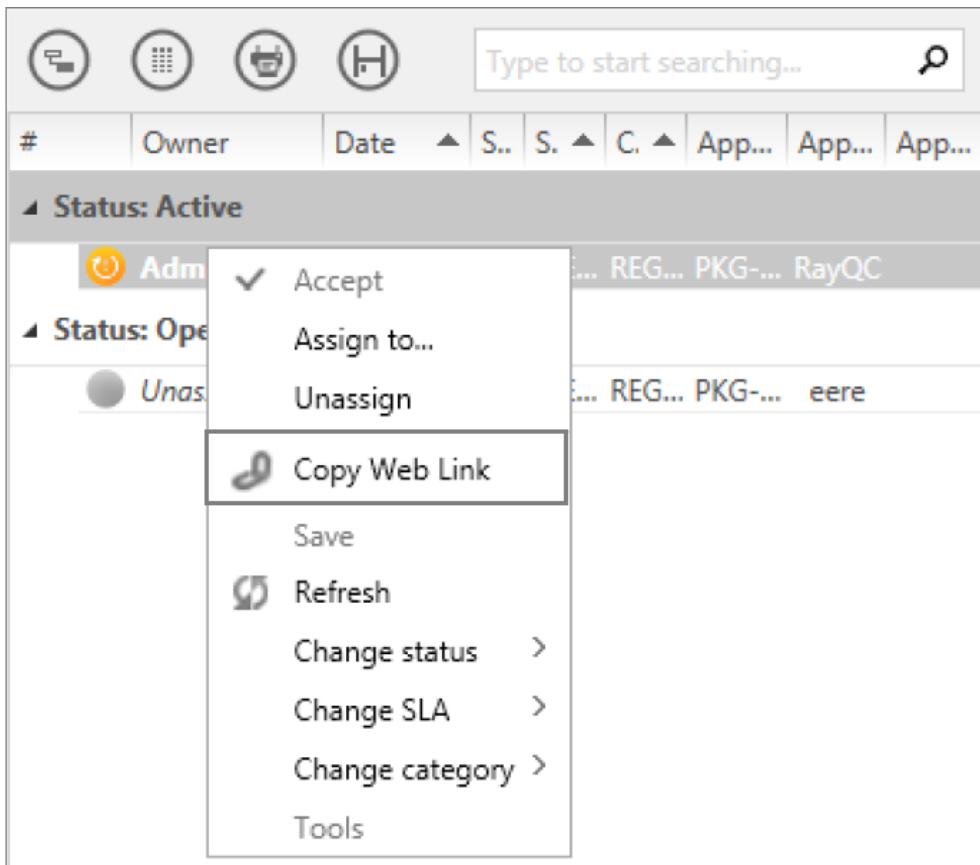

Logging

Taking a positive step towards troubleshooting of issues related to the client, the Apache `log4net` tool has been integrated in this release. This tool enables the client to write output log statements to the specified target. By default this target is set to `%AppData%\Roaming\Raynet\RayFlow\Logs`.

My Appointments

My Appointments view shows all the appointments of the currently logged in user. This feature was previously available only with the RayFlow web client. Now a user can create new appointments directly through the Tasks view of the client and manage existing ones through the My Appointments view.
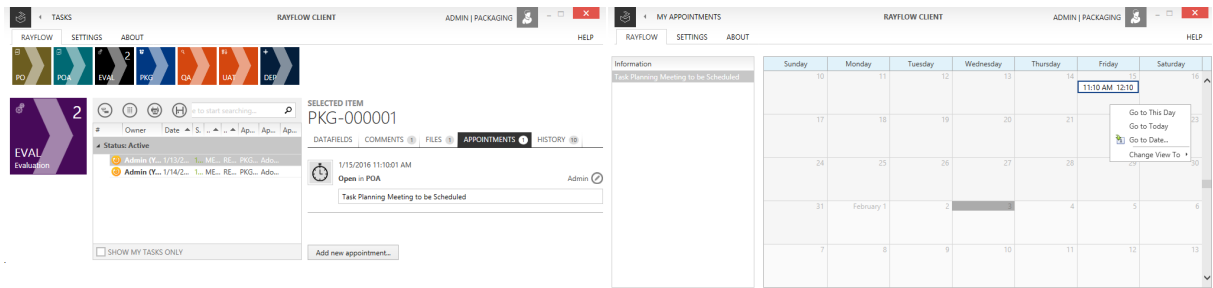

Modified Connection Behavior

Previously the RayFlow client used two users to work with the server. The first user with administrative privileges was used to connect to the server and the logged in user was used to execute tasks. Hence, before starting to work on the project, a user was required to specify the server address, along with administrative user credentials in the connection view. This behavior has now been modified and a user only needs to specify the server address and the logged in user will be used for both connection and task execution.

Resolved Issues

Following issues have been resolved in RayFlow Client 3.3 Hotfix 1:

- **RF-2753**: Client takes very long to load project configuration. This fix for this issue includes improvements in the RayFlow web service

- **RF-2743**: Reading MSI properties in create phase not working

Known Issues

This lists the known issues added by this release of RayFlow Client:

- **RF-2632**: Project Manager cannot edit foreign appointments

- **RF-2621**: Task Order - Default value of checkboxes are not set

- **RF-2411**: Problems on Edition of task properties by standard user with View permission to current phase

- **RF-2410**: Problems on Edition of task properties by standard user with Edit permission to current phase

- **RF-2408**: Problems on Edition of task properties by root

- **RF-2395**: Accept and unassign task problems

- **RF-2389**: No empty option for Dropdown list

- **RF-2314**: Edition of task properties - Admin and ProjectManager can't edit foreign or unassigned tasks

- **RF-2257**: Textbox datafield changes from empty to filled values aren't notified by tasktrack

- **RF-2152**: Client can't connect to server if a proxy configuration script is used
