

Rayflow 2026.3

RayFlow 2026.3 [RTM]

Released on Jul 17, 2026

New Capabilities

Advanced Notification Plugin improvements RF-5208 RF-5214

The Advanced Notification Plugin now supports additional filters — by task type, SLA, and category, as well as single-datafield conditions — so notifications can be scoped more precisely to the tasks that matter.

Windows Authentication for the SCCM connector RPACK-170

The SCCM connector now supports Windows Authentication, making it easier to connect in environments that require it.

Platform Upgrade

Modern .NET runtime RDEP-519

RayFlow now runs on .NET Framework 4.8. This keeps the product on a runtime that continues to receive security updates from Microsoft, and lays the groundwork for future improvements.

Resolved Issues

- Fixed zero-byte files being added to a package's Files tab when moving packages between phases using Batch Jobs. RPACK-283 ZEN-28557
- Fixed an issue where mandatory data fields remained editable for user groups that should have been excluded by the Editable Group Function. RPACK-112 ZEN-34076
